

Stanislavs Romanovs

Berlin, Germany; mail@stanislavromanov.com; stanislavromanov.com; linkedin.com/in/stanislavromanov; +49 174 897 0750

Senior Full Stack Engineer focused on solutions using .NET, Node, Typescript, JavaScript, Angular and React

Top Skills

- **.NET** – Developing with .NET professionally since 2009. .NET Core since its launch in 2014
- **Node** – Making web services, micro services and tools since Node 0.8 release in 2012
- **Typescript** – Primarily using Typescript as a replacement for JavaScript since its release
- **Angular** – Writing scalable front-end systems with good Lighthouse scores since beta release of Angular in 2015
- **React** – Creating web and mobile apps using React with Next.js and Expo since 2020
- **AWS** – Using services like Lambda, S3, ECS, AppRunner, EC2, RDS and everything in-between since 2014

Other Skills

- **Backend** – JavaScript, TypeScript, Node, C#, Firebase, Supabase, Shopify, Contentful, RESTful APIs, microservices, serverless computing, test-driven development, CI/CD
- **Frontend** – JavaScript, TypeScript, React, Angular, Next.js, Tailwind CSS, Material UI, Liquid, SSR, SSG, performance optimization
- **Databases** – SQL and NoSQL knowledge, horizontal scaling and performance optimizations, all major ORM knowledge
- **Mobile** – React Native, Native Script, Expo, Android/iOS, Xcode, Android Studio
- **AI/ML** – OpenAI APIs, Stable Diffusion, Hugging Face, AI integrations, RAG implementations with Langchain using Python
- **DevOps** – AWS, AWS CDK, Terraform, Serverless Framework, SST, Docker, Jenkins, self-hosted Linux servers
- **Testing** – Cypress, Playwright, Karma, Jest, BrowserStack

Work Experience

LUMAS Art Editions GmbH

Berlin, Germany

VP of AI & Engineering, 2026 – Present

TypeScript, Node, MCP, Anthropic API, AWS, ECS Fargate, EventBridge, Terraform, Postgres, Microsoft 365

- Designed and built a unified intelligence layer over LUMAS's catalog, analytics, and operational data behind a single MCP server, letting non-technical staff run complex multi-source workflows (landing-page generation, cross-source root-cause analysis, restock recommendations) that previously required cross-functional coordination
- Built the Terraform-provisioned data pipeline behind it: an EventBridge-scheduled ECS Fargate task streams pg_dump through a Python redactor into a separate RDS mirror, so AI tooling queries real business data without exposing customer or employee PII
- Built an AI grooming assistant for product managers: a panel of agents explores the codebase plus Jira and Figma context to pre-answer blocker questions and write implementation-ready acceptance criteria back to the ticket, cutting grooming time and back-and-forth
- Rolled out enterprise AI access for every employee via Claude (Anthropic Teams), where the MCP intelligence layer ships pre-installed for all users, with access and permissions managed through a Microsoft 365 app
- Authored the company-wide AI strategy: a prioritized roadmap, explicit “what we will not do” boundaries, and a framework for data-backed leadership decisions

WhiteWall Media GmbH

Berlin, Germany

Head of Engineering, 2016 – 2026

TypeScript, Angular, Node, .NET C#, React, Shopify, AWS, Docker

- Architected and led the rewrite of the customer-facing eCommerce platform on a modern Angular + SSR stack, hitting a 90+ Lighthouse score and cutting engineering effort while speeding up feature delivery
- Conceived, championed, and built the Shopify Extension for resellers; it grew from a side initiative into the company's most strategically important product within six months and won the 2026 TIPA Award

- Implemented microservices and containerization with Docker to improve scalability and deployment reliability
- Built and led the engineering team - hiring, mentoring, and structuring delivery - while remaining the senior technical voice in cross-functional decisions

Spotcap (Rocket Internet)

Berlin, Germany

Senior Software Engineer, 2014 – 2016

JavaScript, Typescript, Node, Angular, React, AWS, Docker

- Migrated a legacy Symfony2 monolith to a microservices-based Node architecture
- Rebuilt the front-end application, porting it from a legacy Angular version to React
- Developed and maintained a financial loan service in Node processing millions of euros monthly
- Enforced strict security standards and optimized API performance on multiple microservices

Transmessenger

Toronto, Canada

Senior Backend Developer, 2013 – 2014

.NET C#, React, MongoDB, MSSQL

- Designed and built a multi-tenant CRM with customizable features and secure API endpoints using .NET MVC
- Implemented role-based access control to handle millions of records and complex queries
- Optimized database performance to support high-volume operations

Freelance / Contract Work

GastroHero GmbH

Remote

Senior Full-Stack Engineer, 2026

TypeScript, Node, Shopify (Remix), AWS (Lambda, S3, DynamoDB), SST, React, Klaviyo

- Migrated sensitive order documents (invoices, credit memos, shipping papers) off publicly accessible Shopify CDN URLs into a private S3 bucket, fronted by a Shopify app proxy enforcing token-based, per-order access control that also works for guest checkouts
- Built a daily multi-market monitor crawling the DE/AT/FR/CH storefronts for pricing, availability, and delivery inconsistencies, surfaced through a React dashboard with PDF report export
- Delivered several AWS Lambda automations (SST): a Dachser customs-document pipeline, a Klaviyo-driven CRM enrichment service with a DynamoDB audit trail, and a scheduled Dropbox-to-email document mailer

PricewaterhouseCoopers (PwC)

Remote

Senior Full-Stack Software Engineer, 2025

.NET C#, React, Azure, MSSQL, MongoDB, Microservices, Micro-Frontends

- Contributed to the NGA (Next Generation Audit) platform on the Core team, building and maintaining an authentication service with OAuth 2.0 and Azure AD integration
- Built admin service for user management, role provisioning, and audit logging
- Implemented secure API gateways and ensured compliance with enterprise security standards

Transport UK

Remote

Senior Full-Stack Developer, 2025

React, .NET C#, PostgreSQL, Docker, AWS

- Designed and implemented a comprehensive bus fleet management system from the ground up
- Built React frontend with real-time vehicle tracking, route scheduling, and driver management
- Developed .NET C# backend with RESTful APIs and PostgreSQL for data persistence
- Implemented lost mileage calculation module for fleet cost tracking and financial reconciliation

Other Projects

Remote

2011 – 2013

I have also worked with brands like DKNY, Cisco, SAP, Intel, Autodesk, and Axis – building eCommerce sites, marketing platforms, and mobile applications. Visit stanislavromanov.com/works for more details.
